

Alternative Versions

There are four versions of this mod, which decides how many of the sprites ModLoader will load.

These are:

- All sprites (default) – all sprites are used as normal
- Reduce block sprites – reduce the number of block sprites to two
- Reduce item sprites – reduce the number of item sprites to one
- Reduce block & item sprites – reduce the number of block sprites to two and the number of item sprites to one.

How to install:

- Extract the version file you want to use anywhere.
- Remove the tag so it is called "mod_MiscDigital.class"
- Move it into the zip so it overwrites "mod_MiscDigital.class"
- Run Minecraft.
